## Flare Kits

Flare Kits are now available from Drivetech 4x4.

Have you fitted a bigger wheel and tyre combo and need to widen your vehicle to suit? We have the solution to suit.

### Available in two styles:

**Offroad Design** - Provides a tough bolt-on look flare to increase the stance of your 4x4 and allow for a wider tyre and wheel combo.

**OE Design** - Provides a sleek smooth appearance that represents a factory style look but still allows for a wider tyre and wheel combo.

Made from a UV stable ABS plastic, these flares come in a matte black finish which means you can put them straight on as is, or easily have them painted to match your body colour.

Simple and easy to fit with high quality 3M double sided tape, and each kit comes with speed clips and screws to secure them to your vehicle.
