

Sonnax TH400-4L80/85E Extreme Duty Main Shaft

Main shaft failure is common in these extreme transmission units. OE and aftermarket shafts simply will not hold up in extreme horsepower applications, leading to spline twist and shaft breakage. Sonnax Extreme Duty Main Shaft is manufactured from an exceptionally tough high strength Aermet steel alloy with proprietary heat treatment for unrivalled performance and durability. An advanced torsional design with spline and cross hole refinements make this the most durable 1" main shaft available.

Also recommended for applications above 1,000 HP.

- Top-notch engineering and precision manufacturing deliver unrivalled performance and durability in the 1" stock size
- Rear spline prevents the rear internal gear journal-end from twisting off by engaging the full internal spline of the gear
- Extensive in-vehicle and lab testing with unbroken performance
- Material: Aermet
