Transgo JF011E CVT Pulley Tool Kit

To ensure a quality repair, pulleys need to be disassembled to replace the piston teflons and to inspect the shaft on the pulleys for wear as well as the steel balls. To do this you need a suitable tool to dismantle as there are large spring forces in play.

The new Pulley Tool Kit from Drivetech allows the disassembly of pulleys in the JF011E CVT Transmission. An affordable tool kit that will ensure a quality rebuild of this transmission.

This kit also comes with technical data to assist in the proper repair, as well as new replacement steel balls.

Part Number: JF011E-PTK
