THE WORLD'S BEST AIR FILTER

Get **more** out of every breath your car takes...

K&N is a globally renowned brand, with a proven track record. K&N air filters, oil filters and air intakes are manufactured to the highest standards, and are the result of significant research and testing, conducted in K&N facilities as well as independent laboratories.

K&N are not run of the mill air filters and related products. They are superior products that are designed to give you more horsepower, better acceleration and more fuel efficiency. The reusability, durability and reliability of K&N products makes them incredibly good value over the life of a vehicle.

Motospecs stock over 1,000 K&N product lines and have quick access to the K&N global range.

more performance

K&N air filters are designed to provide minimum restriction allowing high airflow into an engine whilst providing superior filtration of the contaminants that can harm your engine. In the vast majority of cases increased airflow will increase engine performance measured by horsepower and throttle response (torque). K&N replacement air filters are designed to provide up to a 4% increase in horsepower and torque than the standard paper filters that are supplied with new vehicles.

more economical

K&N cotton air filters are washable and reusable, designed for the life of an engine which means you really only need to purchase one K&N filter for the life of the car, and then just take it out and wash it when the vehicle is being serviced. This is a quick and easy process, which saves workshops valuable servicing time while also saving the customer money. When you add in the additional fuel efficiency, the savings are quite compelling.

more for the environment

If you assume an average engine life of 240,000kms in which a disposable air filter must be replaced every 20,000kms, only one K&N air filter would be used during the same period in which 12 disposable air filters were discarded. Considering there are millions of vehicles throughout the world, the volume of disposable air filters that could be eliminated from our landfills is a staggering number.

K&N filters product range

Stock Air Filters:

- Designed to increase horsepower and acceleration while providing excellent filtration
- High air flow with excellent filtration
- Washable and reusable
- Simple drop-in performance

High Performance Kits:

- Guaranteed horsepower
- Replaces entire factory air intake system
- Easy to install

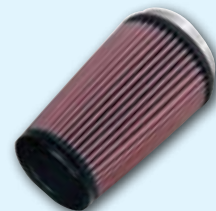

Wrench-Off Oil Filters:

- OE replacement oil filters for most cars, trucks, SUV's and motorcycles
- Heavy duty construction, high flow rates & outstanding oil filtration
- Traps 99% of harmful contaminants

Custom Air Filters:

- 1,000 sizes/shapes
- One year limited warranty
- K&N's high flow cotton media provides performance and protection
- Washable and reusable

Leaders in undercar and underbonnet parts and solutions
